Omni Sourcing

Transforming IT Operations.
Delivering Quality Results.

Cloud Computing Solutions

Omni Sourcing is a leading innovator of infrastructure in Service and Cloud Computing. We understand the need to provide performance and scalability in an efficient and predictable manner. We defy the status quo and re-define how services are delivered. We provide scalable products that customize to your needs. We work to fit into your business model rather than requiring you to fit into ours.

We bring industry leading automation and service combined with ease of use to power your business effectively. We understand your need for comprehensive solutions that deliver value and allow you to meet the expectations of your customers.

Cloud Hosting

The Omni Sourcing system is a comprehensive alternative to cPanel or Plesk. It gives you a single interface to manage multiple virtual hosts. It supports the creation of Apache virtual hosts, DNS zones, MySQL databases, and mailboxes with Sendmail or Postfix. Give your users individual webmin accounts to manage their domains and files.

Power. Security.

Power

Redundant power available via UPS and diesel generator backup

Cooling and humidity controls via redundant, multi-zone HVAC Abundant chilled water capacity at 2(N) redundancy

Security

24-hour onsite personnel

Secure entrance with check-in station and man-trap

Card-key access system Interior and exterior video surveillance

Multi-Layer Security Strategy

Physical and Operational Security

In the cloud, there can be many points of entry or attack for malicious activity. Omni Sourcing provides a wide range of security options for you to choose from, so you can protect your infrastructure with multiple, overlapping layers of protection customized to your needs and interests.

Network Security

Even the smallest flaw can compromise your company's network. Omni Sourcing's innovative network architecture and commitment to using the most advanced hardware technologies dramatically minimize your data center and server exposure to outside threats. The network integrates three distinct and redundant architectures into our multi-tiered network topology. Your systems are fully accessible to your administrative personnel but are safely off-limits to others.

More Cloud. More Security. Less Money. Compare Us.

Data Center

The Omni Sourcing data center is located in Dallas, TX at the crosshairs of over sixteen fiber providers and unrivaled power redundancy that include independent TXU substation feeders and six in-building main switchgear rooms.

- SSAE 16 SOC-1 Type II compliant facility
- Lightening protection system
- Dry pipe fire suppression system

System, Application, and Data Security

Beneath our layers of physical and network protection, your individual computing systems, several tiers of comprehensive, standard security features further safeguard applications, and data.
